Interpretation

1.Non-reactive : Specimen Negative for HIV.

2.Reactive : Specimen Positive for HIV
(HIV-1,HIV-2)

3.A negative result does not exclude the possibility of infection with HIV.
-Low or no HIV antibodies maybe undetectable in the window period (Low level of antibodies).
-e.g. early seroconversion (specimens).
-HIV-infected persons taking antiretroviral medication

4.To be a screening assay, all positive results should be confirmed by other complementary method (Western Blot Assay / HIV PCR)

5.Suggest Clinical Correlation.

*** Final Report ***

1.Test result to be interpreted in co-relation with clinical history & symptomatology.

2.Supplemental tests advised for confirmation

SONOGRAPHY OF ABDOMEN AND PELVIS

FINDINGS

Liver: 103mm, Normal in size and echotexture. No IHBRD. No evidence of focal hepatic lesion. Portal vein is normal in caliber. Hepatic veins and the IVC are normal.

Gall bladder: Well distended. No evidence of Gall bladder calculi. Gall bladder wall thickness appears normal. No pericholecystic collection seen.

Pancreas: Head and part of the body of pancreas normal in size and echotexture.

Spleen: 83mm, Normal in size, shape and echotexture. No evidence of focal lesion seen.

Right kidney: Measures 75 x 28mm. Normal in size and echotexture. Cortico-medullary differentiation is maintained. P-C system is normal. No evidence of calculi.

Left kidney: Measures 79x 29mm. Normal in size and echotexture. Cortico-medullary differentiation is maintained. P-C system is normal. No evidence of calculi.

Urinary Bladder: Normally distended. No evidence of calculi. Wall thickness is normal.
